

Fig 1: Benchmark anatomy

Figure 1 — Benchmark anatomy

Fig 3: Exact blanket -> graded (eps sweep)

Figure 3 — Exact vs. Hessian-approximate blanket leakage

Fig 5: Finite-sample inference

Figure 5 — Finite-sample inference: raw vs. bias-corrected leakage

Fig 7: Structural ambiguity

Figure 7 — Structural ambiguity is not sampling uncertainty (infinite-data result)

Fig 2: Boundary complexity vs. leakage

Figure 2 — Boundary complexity vs. leakage, fixed $I = \{1, 2, 3\}$ 

Fig 4: Observer/representation dependence

Figure 4 — Observer/representation dependence of the inferred blanket

Fig 6: Graded membership stability

Figure 6 — Graded membership as statistical selection stability (fixed-interior problem)

Fig 8: Static blanket vs. finite-time dynamics

Figure 8 — Static blanket vs. finite-time dynamics are distinct objects
